RESTORATIONS

Complete and partial restorations now available in our shop. Wiring installation also available. Please inquire.

OPTIONAL WIRE HARNESSES

Did you know that we can incorporate additional wires in your harness? Many satisfied customers have us add some of or all of the following – turn signals, fog lights, back-up lights, electric fuel pump, CB antenna wire, radio speakers, or any other wire that you might desire. This of course, adds to the overall cost of the harnesses. If interested, please contact us, and we will quote you prices on these optional harnesses.

TURN SIGNAL AND HAZARD WARNING SYSTEMS

There are a number of alternatives when it comes time to install hidden or conventional after-market TURN SIGNALS in your Antique or Classic car. The best solution is to incorporate these wires into your new harnesses. However, if your car has already been rewired, there are solutions to achieve the same results.

It is not necessary to have two element parking lights. The following single element bulbs can be used for front turns: cowl lights, fender lights, parking lights, or parking lights in headlamps. The car must have two tail lamps with stop lights. In the event your car does not have stop lights, we can work around this problem with a relay.

In the event that you wish to use a turn signal switch that mounts on the steering column, it is best that you locate one with at least six wires. The six wire type will require you to convert your parking lights to double element bulbs. There are turn signal switches with seven wires or more (single stat is one). This type of switch will allow you to use your single element parking light bulbs.

Should you not wish to install a turn signal switch on your steering column, then we can offer you the following options that utilize hidden toggle switches. These systems are designed for cars with single element parking lights and dual taillights with stoplights. The systems offer turn signal and four-way flashers.

TS-36	Turn signal & 4-way flasher harnesses with two special toggle switches. NOTE: This is the under dash harness ONLY.....	52.00
TS-42	Turn signal & 4-way flasher harness with two special toggle switches and two electric relays, flasher and fuse holder. NOTE: This is the under dash harness ONLY. This harness can be used with 3-wire steering column turn signal switch if desired.....	197.50
LL41488	Turn signal & 4-way flasher harness with three special toggle switches & two electric relays. This system is designed for cars with a center stop light (usually on the trunk), such as Forty era Chrysler cars & Lincolns. This system when activated with a toggle switch will give you three stop lights (center & 2 taillights). You will also have turn signals & 4-way flashers. For judging purposes, this system can be deactivated with one toggle switch & your car will judge normal. This harness can be used with a three wire steering column turn signal switch if desired.....	255.50
TS-37	Wiring kit for cars that have harnesses that are not equipped with optional turn signal wires. This KIT includes wire & autoloom that will enable you to run one wire to your front left park light, one wire to your rear left stop light & two wires to your stop light switch.....	36.75
F49515	Flasher harness for use with TS-36 system. Includes harness, flasher socket & fuse holder. Does NOT include flasher.....	24.25
TS-36A	Turn signal instructions & two special toggle switches. This will enable the "Do-it-your-selfer" to install their own turn signal & 4-way flasher system. Does NOT include wire, autoloom, flasher, fuse & etc.....	36.75
